Sat: 9 a.m. - 1 p.m.

We are pleased to offer you a detailed consultation
tailored to your individual requirements.

Stove Tiles

Works of Art for
Heat Storage and Design

**Uniqueness
in Design**

Health benefits of the long-wave **thermal radiation**:

- gentle infrared-C-radiation
- calming effect via the vegetative nervous system
- provides for maximum relaxation
- encourages the blood circulation
- eases muscle tensions
- strengthens the immune system
- ...

Ceramic stove tiles possess a very high **heat storage capacity** and they giving off this heat for hours on end.

The gentle thermal radiation heats the surface of walls as well as of solid objects in the living space but not the air. The resultant effect of **radiant heat** leads to a uniform room temperature without overheating. The air maintains its freshness as well as purity and the result is a healthy and pleasant indoor climate.

The function of the tiled stove as a (partly solitary) heating device provides for an important benefit in the **saving of heating costs**:

- Logs of wood are renewable energy carriers
- Wood is cheaper than heating oil and natural gas
- Optimal heating even in the transitional period

Environment and tiled stove

- Modern tiled stoves are optimized in terms of combustion and hardly cause any fine particulates
- Wood is CO2-neutral

Quality and crack resistance

- Every one of our tiles is manufactured of the natural products earth, water, fire and air by our master craftsmen
- Tiles can hardly crack and therefore they do not have to be painted every year like a plastered stove

Cleaning and maintainance

- Glazed tiles are extremely easy to clean
- Pure water, 1 dash of vinegar and a soft cloth are sufficient for the cleaning

Tradition & timeless values

A tiled stove constitutes an everlasting object of value. Its tiles are becoming more beautiful with age, they are warming and will also please the next generation.

Tiles have the decisive advantage of heat storage and due to their special ceramic mass they are able to evenly control the discharge of heat.

= **Heat storage ceramic.**

In contrast to the ceramic stove tile, modern **flags** are dense and are therefore unable to store heat.

	Tile	Flag
Property	stores heat	is dense
Fields of application	living spaces for tiled stoves and body contact	bathroom, kitchen,... for walls and floors
Shape	3-dimensional	2-dimensional

Heat storage & radiation quality

The tiled stove - the embodiment of coziness

Tile versus flag
