

HOME SPA „SOFT STYLE“: A gentle design language in the ceramics reconciles harmony and creative freedom.

Ceramic heat radiation has long since been convincing due to its health enhancing effect in the gentle, long-wave infrared range. The Sommerhuber manufactory has been living and creating this health enhancing benefit for generations. With its latest product development „soft style“ in the hygienic large-area ceramics, Sommerhuber draws on the charm of gentle curves and extraordinary soft design. It does so with much attention to detail.

Relaxation and wellness in one's home spa – that means enjoyment redefined. With the multifunctional warming room „Home Spa“, SOMMERHUBER establishes top level living standards for the place where one feels most comfortable – at home.

Heat. One of the oldest remedies in history.

Pleasant, gentle radiant heat combined with the most exclusive kind of vapor makes the SOMMERHUBER Home Spa an individual haven of wellness. Those heat storing ceramics made by Sommerhuber with their gentle radiant heat in the long-wave infrared range have a positive effect on health and ensure an unequalled coziness. The steam fountain Victoria substantially contributes to this fact while optional light and music accents round off the experience.

Organic design language perfectly combined with state-of-the-art technology.

SOMMERHUBER large-area ceramics do not only impress with aesthetics and perfect hygiene. The electrically heated seating surface is available in a free-floating version and also with a pedestal in 22 current glazes. The back rest may be designed as structure: Flute, Nappa or Smooth. This is a pleasurable experience that combines design and sensuality in an ideal way. For further information, please visit us under www.sommerhuber.com.
