

Lounger Two – the floating heated lounger

Nothing but pure relaxation – the Lounger Two by Keramik Manufaktur Sommerhuber provides a special kind of wellness experience. Its unique health-promoting infrared ceramic radiant heat provides incomparable relaxation.

The ergonomic surface follows the human body perfectly.

When you feel the stimulating effects of soothing warmth, the day-to-day stress is forgotten at the blink of an eye. Body and soul are equally stimulated. The high-quality Sommerhuber heat-storing ceramics transmit heat to the body in the form of mild ceramic radiant heat. The mild long-wave infrared radiant heat is stress-relieving via the autonomic nervous system, promotes blood circulation, relieves muscular tension and positively influences the immune system.

The Lounger Two appears to float in space and makes it an eye catcher in every room. The Lounger Two is available in three different versions: as a soloistic object with freestanding head- and footrest, with the headrest installed in the wall and a freestanding footrest or, alternatively, installed in the wall on both ends. The Lounger Two is offered in nineteen modern glazes so that every taste of colour is catered for.

Hygiene plays a dominant role – the lounger is made of large-scale ceramics with only two seams across the entire surface – in other words, not the usual mosaic seam pattern.

The Lounger Two's surface temperature is continuously adjustable whereby 30 – 34°C are considered typical values for the perfect surface temperature. The Lounger Two is electrically heated and designed for a static load of 400 kg.
